Reflections:

Bitanga

Our group first planned the activity by choosing the startup sales dataset and assigning roles to each member. We created a shared Google Sheets file where everyone could work on the dataset, formulas, and dashboard. As the project manager, I helped organize the sheet and made sure the tasks were clear so we could complete the requirements.

One of the main challenges we encountered was coordination within the group. Some members were not very responsive, and because the deadline was getting close, only two of us ended up doing most of the work. We had to divide the tasks quickly so we could still finish everything on time. I worked on the formulas for the dataset and also created the charts for the dashboard. At the same time, I helped my teammate understand some parts of the sheet so we could complete the remaining requirements faster.

Even though it was a bit stressful toward the end, this activity helped me learn more about using Google Sheets, especially with formulas, organizing data, and creating charts. It also showed me how important communication and teamwork are when working on collaborative tasks online.

Galo:

My assigned role in the activity was mainly to work on the Analytics Summary slide. I was responsible for doing most of the analysis using pivot tables and creating the dashboard tiles to present the results clearly. I also helped by inputting all the data into the dataset sheet and organizing the information step by step so it could be used properly for the pivot table analysis. My contribution focused on preparing the data, generating summaries such as revenue by region and category, and arranging the dashboard so the results were easier to understand. One challenge I faced was making sure the pivot tables were set up correctly, especially when arranging the fields and ensuring the calculations were accurate. Through this activity, I learned a new skill in using pivot tables and dashboards to transform raw data into organized and meaningful visual summaries for analysis.
